Simba Drivers for Google BigQuery

Introduction

Google has partnered with [Simba Technologies Inc](#), a [Magnitude Software Company](#) to provide ODBC and JDBC drivers that leverage the power of BigQuery's [Standard SQL](#).

The intent of these drivers is to help users connect the power of Google BigQuery with existing tooling and infrastructure that does not have native integration. If you are building new integrations with BigQuery, we recommend you consider the [native API](#). The functionality exposed by an ODBC/JDBC connection is necessarily a subset of the full capabilities of BigQuery.

Current ODBC Driver Releases (2.0.6.1011)

- Windows 32-bit (msi)
- Windows 64-bit (msi)
- Linux 32-bit (tar.gz)
- Linux 64-bit (tar.gz)
- Mac OS X (dmg)

Previous Version (2.0.5.1009)

Current JDBC Driver Releases (1.0.6.1008)

- JDBC 4.1-compatible
- JDBC 4.2-compatible
